     - Not available

B. Engineering controls
   - A system of local and/or general exhaust is recommended to keep employee exposures above the Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. The use of local exhaust ventilation is recommended to control emissions near the source.

C. Personal protective equipment
   - Respiratory protection
     - Under conditions of frequent use or heavy exposure, Respiratory protection may be needed.
     - Respiratory protection is ranked in order from minimum to maximum.
     - Consider warning properties before use.
     - Dust, mist, fume-purifying respiratory protection
     - Any air-purifying respirator with a corpuscle filter of high efficiency
     - Any respiratory protection with an electromotion fan (for dust, mist, fume-purifying)
     - Self-contained breathing apparatus with a corpuscle filter of high efficiency
     - For Unknown Concentration or Immediately Dangerous to Life or Health: Any supplied-air respirator with full facepiece and operated in a pressure-demand or other positive-pressure mode in combination with a separate escape supply. Any self-contained breathing apparatus with a full facepiece.
   - Eye protection
     - Wear primary eye protection such as splash resistant safety goggles with a secondary protection face shield.
     - Provide an emergency eye wash station and quick drench shower in the immediate work area.
